1. Introduction

This document describes the FIX 4.2 implementation used by the BIDS Trading system. BIDS Trading supports conditionals and firm orders. This includes both firm and firm-ups for Canadian, Australian, Japan and US equities and conditionals and firm-ups for pan-European securities. For an EU integration Level 2 must be supported.

In some sections, one or more "Notes to BIDS Trading Developers," discuss special aspects of the messages, protocols or contents. These are used to guide the reader as to what will be developed or used by BIDS Trading and what is included for completeness or other purposes.

The contents are based on FIX Version 4.2 with Errata 20010501. The original version of the FIX 4.2 specification can be obtained from FIX Protocol Limited at http://www.fixprotocol.org.

1.1. Text Conventions

Convention	Description
Italics text	Used to indicate that the italicized term is not a literal – it is a representation and description of a value. Examples: *YYYY-MM-DD* is used to describe a date format and is not used literally – a value that would match this date value would by 2009-12-08.
Bolded Item	Used to indicate a literal value.
Shaded background in a table	BIDS Trading specific data items are represented using a 10% grey background in all message tables, data file description tables, and data dictionaries.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

2. BIDS TRADING Overview

The BIDS Trading platform supports both Firm orders and Conditionals. It is crucial for market participants to understand the differences between these concepts and how each type is specified using the FIX protocol.

2.1. Conditionals

Conditionals occur when the volume is submitted to the system but is not committed to the BIDS Trading platform. In the US system, a conditional may be active in another system and until a conditional is replaced with a Firm order. Within the BIDS system it will not trade. This allows a trader to "test the waters" and see what liquidity may be available to them in the BIDS Trading platform. For a US system this section is only applicable if using conditionals.

For pan-European securities, conditionals are submitted to the system and will also remain uncommitted until accepted as trade by the ETR gateway. This section is required if using EU system,

2.1.1. Invitation to Firm up to Trade – applies to US, EU, Australia and Japan

If a Conditional enters the BIDS Trading platform and there is a Firm and/or Conditional on the other side that matches or crosses it (i.e., both price and volume), then the trader will be invited to firm-up their conditional to trade. The invitation occurs if the following conditions are met:

- The prices match or cross.
- The Conditional meets the minimum volume requirements of the contra and vice versa.
- The contra has indicated a willingness to invite Conditional to firm up to trade.
- The BIDS Trading Scorecard℠ for the trader must meet or exceed the BIDS Trading Filter℠ setting for the contra and vice versa.
-

This means that the trader has the opportunity to firm up their Conditional so that a trade may occur. This invitation does not last indefinitely as the system imposes a time-out, and if it takes a long time for a trader to firm-up the conditional, the contra may have expired or manually cancelled. Time is of the essence when firming up. Once a Conditional is changed to Firm and provided auto match conditions are met, the trade will occur immediately.

In a US or AUS workflow depending on how integration is done, Conditionals may be sent via the same or a different gateway than Firm orders. When it comes time to firm-up, a new Firm order will be sent via the gateway. The **Original Client ID** field in the NewOrderSingle message for the Firm order should be set to the client ID of the Conditional. Given that, the BIDS Trading platform will cancel the Conditional on acceptance of the Firm order.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

When using the EU workflow, a new Conditional will be sent via the gateway. The **Original Client ID** field in the NewOrderSingle message for the Firm order should be set to the client ID of the Conditional. Given that, the BIDS Trading platform will cancel the Conditional on acceptance of the Firm order and forward the trade to the ETR gateway. Once the trade is accepted and confirmed it will move from a pending state to a traded state.

2.2. Firm Orders – applies to US, Australia and Japan

Firm orders have committed volume to the BIDS Trading platform and are eligible for immediate auto match. Firm orders can be sent to the BIDS Trading platform directly or could originally have been entered as a Conditional (see above). They have been changed to Firm either because of an invitation or because of direct action by the trader. This discussion assumes that, at the start of each lifecycle, the order is already Firm and will not discuss the steps necessary to take a Conditional and make it Firm.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

2.2.1. Auto match

NBBO protection is always enabled for automatched trades.

Two Firm orders will automatically match under the following conditions:

- **The symbol is available for automatch;**
- **The prices match or cross at or within the NBBO;**
- **The volumes on both firm orders meet the other's minimum volume requirements.**

If all of these conditions are met, then a trade is generated at a point as close to the NBBO midpoint as possible, using the maximum volume available.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

2.3. Automatic Cancellation

In the BIDS Trading platform, conditionals and firm orders will be automatically cancelled under specific circumstances. For conditionals and firm orders received via a FIX gateway, an execution report indicating that conditionals and firm orders have been cancelled will be generated. If the FIX session is not connected, those reports will be queued and delivered once the session has been reestablished.

Condition	What is Cancelled
Loss of connection for FIX Session	All conditionals and/or firm orders received via the lost connection will be cancelled by the BIDS Trading platform.
Regulatory halt for a symbol	All conditionals and/or firm orders on that symbol are cancelled
User, desk, or firm being suspended	All remaining conditionals and/or firm orders for that firm, desk, or user, no matter what the source are cancelled
Introducing Broker revoked sponsorship	Remaining orders for that firm using that Introducing Broker, no matter what the source of those are cancelled

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

3. Levels of FIX Integration

There are two levels of integration possible with the BIDS Trading FIX interface. Market participants are encouraged to discuss with BIDS Trading which level of FIX integration is appropriate to meet the participant's requirements.

Level	Name	Description	Suitability	Business Functionality	Custom Fields (Tags)	Custom Messages
Level 1	Basic FIX 4.2	FIX 4.2 compliant routing interface for firm orders.	Suitable for trading systems that won't be modified at all	Firm Orders	No	No
Level 2	Extended Conditionals and/or Firm Orders	BIDS Trading custom tags are added to the Basic FIX 4.2 messages. Support Conditionals and/or Firm orders.	Suitable for trading systems that will support extra order attributes	Firm Orders Conditionals	Yes	No

Each level is deemed to be a separate API to the BIDS Trading platform. The implications of these being different APIs is that a firm that wants to change FIX integration levels will be required to re-certify with the BIDS Trading platform, and then have their FIX session reconfigured after certification has been successfully achieved.

3.1. Level 1 – Basic FIX 4.2

With basic FIX integration, BIDS Trading will only expect that standard FIX tags will be used, and no BIDS Trading user-defined tags will be present in the messages. With this type of integration, only Firm orders will be communicated via the gateway.

3.2. Level 2 – Extended FIX 4.2 Conditionals and/or Firm Orders

This variant of FIX includes the BIDS Trading user-defined tags on New Order Single, Cancel Replace Request and the Execution Report to support both Conditionals as well as Firm orders.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

4. Other Notes on BIDS TRADING FIX

4.1. User-defined Tags and Message Types

BIDS Trading currently contains extended tags in extended FIX 4.2 BIDS Trading protocol.

4.2. Presence of Unexpected Tags

The BIDS Trading FIX gateway will reject messages that contain tags that BIDS Trading does not expect. The message will be a session Reject (MsgType=3) with a SessionRejectReason of '2' (Tag not defined for this message type).

4.3. Price

The BIDS Trading platform will allow for a conditional and/or a firm order at different price levels.
The number of decimal places in the price is determined by the symbol's configured tick size. Tick size is specific to each region that BIDS operates in. BIDS tick sizes and supported decimal places are aligned with local market regulations and exchange rules.

The ASIC Tick sizes are as follows:

Price of equity market product	Tick Size
Greater than or equal to $2	$0.01
Priced between $0.10 and $2	$0.005
Priced at less than $0.10	$0.001

4.4. Volumes

The BIDS Trading platform will allow a volume to the maximum of a signed 32-bit number.

4.5. Locates for Short Sells

BIDS Trading has implemented user-defined fields LocateBroker (tag 5700) and LocateIdentifier (tag 5701) following the widely adopted practice recommended by the FIX Protocol organization and followed by many OMS/EMS vendors. If a locate is required for short sells, the LocateReqd field (tag 114) should be set to "N".

Multiple locate brokers and locate identifiers are specified within tags 5700 and 5701 separated by commas. Tag 5701 is optional. This implementation was done to ease the implementation burden on FIX Users that were not able to support custom repeating groups.

If LocateReqd (tag114) equals"Y", then LocateBroker (tag 5700) and LocateIdentifier(tag 5701) should not be specified and will be ignored.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Note that in markets where providing a Locate Broker is not a regulatory requirement (e.g. Australia), users can simply omit sending LocateReqd(tag 114), LocateBroker(tag 5700) and LocateIdentifier(tag 5701).

Example specifying locate information

Given a short sell where there are three locate brokers

Broker Name	Locate Identifier
BRKR_A	A001
BRKRB	
CBrokers	CCC

The following FIX fields would be populated as follows in this message excerpt:
... <*soh*>114=N<*soh*> .... <*soh*>5700= BRKR_A,BRKRB,CBrokers<*soh*>5701=A001,,CCC<*soh*> ...

Notes:
Each subfield within 5700 and 5701 are related to each other – as in the above example the first subfield of 5700 value "BRKR_A" is associated to the first value in 5701 value "A001".
The Locate identifier is an optional field – notice that in the above example there is no locate identifier for the BRKRB locate broker – so the field is blank in the 5701 field.

4.6. System-assigned IDs

BIDS Trading uses a 13-char alphanumeric to assign IDs to conditionals and/or firm orders. The high-ID 9characters are the conditional or firm orders itself (the BIDS Trading ID), and the low-ID 4 digits are a sequence number for activity on that conditional or firm order.

The main purpose is to support systems that expect an execution report for a Cancel-and-Replace request to contain a new system ID, and not the same system ID. Internally, BIDS Trading does not create a new ID during a Cancel-and-Replace, but simply edits the ID in place (i.e., the BIDS Trading ID remains unchanged). This ensures continuity and traceability throughout the lifecycle of a conditional and/or firm order. To accommodate assigning a new system ID for a FIX Cancel and Replace Request, the sequence number is incremented.

For example, the table below displays how the BIDS Trading platform ID will work during the life of a conditional or firm order. The client ID shown is an example. Your actual ID will be determined by your system.

Action	Client ID	BIDS Trading ID
New Order Single	1001	0000010010001
Cancel and Replace 1001 with 1002	1002	0000010010002
Cancel and Replace 1002 with 1003	1003	0000010010003

Note: The high-ID 9 characters remains "000001001." It is the lower ID 4 digits that change from 1 to 2 to 3 as there are modifications to the conditional or firm order. The sequence number does not change after trades occur.

4.7. Pass Through Tags

BIDS Trading has implemented a new feature called "pass through." It contains a list of tags that BIDS Trading allow client to send in with their tag value, and BIDS Trading will echo them back in the outbound messages.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

5. Session Protocol

All levels of the BIDS Trading FIX Protocol use the same session level (administrative) messages:

5.1. Permitted Session Level (Administrative) Messages

Message Name	MsgType (tag 35)	Inbound to BIDS Trading	Outbound from BIDS Trading
Logon	A	Initiate a FIX session	Accept a FIX session by responding to inbound Logon
Heartbeat	0 (zero)	Heartbeat to indicate session is still active or a response to a Test Request	Heartbeat to indicate session is still active or a response to a Test Request
Test Request	1	Determine if BIDS Trading FIX connection is still active	Determine if market participant FIX connection is still active
Resend Request	2	Request resend of missing or garbled messages	Request resend of missing or garbled message
Reject	3	Reject a garbled message – should not be used to reject application messages that are well formed	Used to reject garbled messages and invalid application messages
Sequence Reset	4	Indicate to the other side a change in sequence number – usually used to skip the resend of administrative messages	Indicate to the other side a change in sequence number – usually used to skip the resend of administrative messages
Logout	5	End a FIX session	End a FIX session

5.2. BIDS Trading CompID Values

The BIDS Trading gateway will expect “BIDS” to be in the TargetCompID on messages inbound to the BIDS Trading market. This value will be the SenderCompID on messages outbound from the BIDS Trading market.

Tag #	Field Name	Inbound to BIDS Trading Market value	Outbound from BIDS Trading Market value
49	SenderCompID	Assigned value used to identify firm	BIDS
50	SenderSubID	Assigned userid	Assigned subid
56	TargetCompID	BIDS	Assigned value used to identify firm
57	TargetSubID	Assigned subid	Assigned userid

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

5.3. How to obtain BIDS Trading Firm Identifiers and User IDs

When a firm becomes a BIDS Trading participant, a firm identifier is assigned by BIDS Trading administrative staff. This firm ID is to be used as the CompID.

A firm has control over user management and BIDS Trading user ID assignment of its own staff. Part of the administrative work a firm has to do is to set up which users are permitted to transact via a FIX gateway and define the mapping between SubIDs (called OMS/EMS user) and BIDS Trading user ID. There are two logical choices for OMS/EMS user IDs:

1. OMS/EMS user ID is the same as his/her BIDS Trading user ID – therefore, some form of ID lookup is required on the firm's system;
2. OMS/EMS user ID is the same as the user's ID on the firm's system – no ID lookup is required on the firm's system, BIDS Trading will take care of translating between OMS/EMS user ID (i.e., SubID) and BIDS Trading user IDs.

5.4. Sequence Numbers

BIDS Trading does not support 24-hour sessions. Clients can connect at 6:20am Local Market Time until 17:30pm Local Market Time. Any session active at 17:30 Local Market Time will be terminated with a logout. Sequence numbers are reset to 1.

5.5. Logon

The logon message must be the first message received, and the firm must wait for a logon from BIDS Trading before beginning resend/gap fill operations.

5.6. Logout

Your firm is expected to issue a logout prior to 17:30pm Local Market Time. If not, BIDS Trading will issue a logout and terminate the TCP connection.

Whichever side issues the logout is expected to terminate the TCP connection. If an initiating logout is received with a higher sequence number than expected, then, as per the FIX specification, gap fill operations are to be completed before finishing the logout sequence.

5.7. Heartbeat and Test Request

BIDS Trading will use the heartbeat interval specified in your firm's logon message. A heartbeat of 30 seconds is recommended as a reasonable balance between network efficiency and timely detection of a lost connection. The use of heartbeat and the test request will be as per the FIX 4.2 specification.

5.8. Resend Request

If your firm receives a resend request with a sequence number higher than expected, your system must first resend the requested messages before sending its own resend request.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

While there are two methods for requesting messages to be resent (i.e., asking for a specific range vs. asking for all messages after a particular sequence number), it is recommended that all resend requests follow the latter: request all messages after a particular message. This avoids hunting and race conditions in which responses to resends causes more resends.

5.9. Reject

Session-level rejects are used under the following conditions:

- **When a mandatory field is missing**
- **When a field contains improperly formed data**
- **When a field contains a value not supported by standard FIX 4.2 protocol**
- **When a field that is not supported by standard FIX4.2 protocol is present in a message (except for customized tags)**

If BIDS Trading rejects a message sent by your firm, your firm's system must not try to resend the message.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

5.10. Standard Message Header

5.10.1. Inbound Standard Message Header

FIX GW Tags	FIX GW Name	Req'd	Comments
8	BeginString	Y	FIX.4.2 (Always unencrypted, must be first field in message)
9	BodyLength	Y	(Always unencrypted, must be second field in message)
35	MsgType	Y	Defines message type. (Always unencrypted, must be third field in message)
34	MsgSeqNum	Y	Message sequence number
43	PossDupFlag	N	Always required for retransmitted messages, whether prompted by the sending system or as the result of a resend request.
49	SenderCompID	Y	Assigned value used to identify firm sending message.
50	SenderSubID	N	SendSubID has to be a known BIDS Trading OMS/EMS user if provided Pass through tag
52	SendingTime	Y	This must always be within 60 seconds of the time BIDS Trading receives it, or it will be rejected.
56	TargetCompID	Y	This is the assigned value used to identify the receiving firm. Is usually set to 'BIDS'
57	TargetSubID	N	Assigned Subid
97	PossResend	N	BIDS Trading will see if the conditional or firm order has already been received and processed, and ignore it if it already has. Value is always 'Y'
115	OnBehalfOfCompID	N	Trading partner company ID. Optionally provided by a routing service (e.g. an EMS) to identify the originating company.
116	OnBehalfOfSubID	N	Trading partner SubID. Optionally provided by a routing service (e.g. an EMS) to identify the originating Sub ID. May be used in lieu of tag 50 to provide a known BIDS Trading OMS/EMS user.
122	OrigSendingTime	N	Required for message resent as a result of a ResendRequest. If data is not available set to same value as SendingTime
128	DeliverToCompID	N	BIDS Trading will use it as the routing destination If specified, it must be a BIDS recognized external execution venue (i.e) SMAEBXL) or the keyword "None". Defaultable

5.10.2. Outbound Standard Message Header

C in Prov'd means provided under certain circumstances. Tag gets sent out based on certain conditions, which is described in the Comments column.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

FIX GW Tags	FIX GW Name	Prov'd	Comments
8	BeginString	Y	FIX.4.2 (Always unencrypted, must be first field in message)
9	BodyLength	Y	(Always unencrypted, must be second field in message)
35	MsgType	Y	Defines message type
34	MsgSeqNum	Y	Sequence number
43	PossDupFlag	N	Always required for retransmitted messages, whether prompted by the sending system or as the result of a resend request.
49	SenderCompID	Y	Always set to 'BIDS'
50	SenderSubID	Y	Assigned subid
52	SendingTime	Y	Time of message transmission.
56	TargetCompID	Y	Assigned value used to identify receiving firm.
57	TargetSubID	Y	Assigned value used to identify specific individual or unit intended to receive message.
97	PossResend	C	Provided as "Y" when message may be duplicate of another message sent under a different sequence number
122	OrigSendingTime	N	Provided for message resent as a result of a ResendRequest. If data is not available set to same value as SendingTime
128	DeliverToCompID	N	Trading partner company ID. Echo back tag 115 value of the associated inbound request.
129	DeliverToSubID	N	Trading partner SubID. Echo back tag 116 value of the associated inbound request.

5.11. Timestamps

The BIDS Trading platform can cater to timestamp requirements of different audience. Input timestamps can be of second, millisecond, microsecond, and/or nanosecond precision. For outbound timestamps, the precision is set on a gateway-by-gateway basis. The choices are millisecond, microsecond, and nanosecond. There is also a Legacy option for backward compatibility, which uses millisecond in general with a few specific tags using second precision.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

6. LEVEL 1 BASIC FIX 4.2 PROTOCOL

Chapters 6 and 7 are intended to capture FIX requirements as they pertain to the US market. Where inconsistencies exis between jurisdiction specific variations in chapters 9 (Canada), 10 (Australia) and 11 (Japan), the jurisdictional changes will take precedence.

With Basic FIX integration, only standard FIX tags and FIX messages will be used and no BIDS Trading user-defined tags will be present in the messages. With this type of integration, only Firm orders will be communicated via the gateway.

6.1. Default enabled Tags

Default values in the FIX messages are configurable on a per trader basis by BIDS administrators.

For detailed descriptions, please see Section 9 BIDS Trading FIX Standard Tag Definitions.

6.2. Application Messages Supported

BIDS Trading BASIC FIX 4.2 Protocol Application Messages

Inbound

Message	MsgType	Usage
New Order Single	D	Submit new firm order to BIDS Trading
Cancel and Replace Request	G	Modify an existing firm order in BIDS Trading
Order Cancel Request	F	Completely cancel unfilled quantity of a firm order in BIDS Trading

Outbound

Message	MsgType	Usage
Execution Report	8	Report the state of a firm order previously submitted to the BIDS Trading
Order Cancel Reject	9	Report the rejection of a firm order cancel request or Cancel and Replace request

6.3. Level 1 Inbound Messages

6.3.1. New Order Single

Tag	Field Name	Req'd	Default able	Length	Comments
	Standard Message Header	Y			MsgType = D

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Req'd	Default able	Length	Comments
1	Account	N	Y	30	Account mnemonic as agreed between buy and sell sides
11	ClOrdID	Y		30	Unique identifier as assigned by firm. Must be <= 30 characters
15	Currency	N			Optional, default to symbol's base currency. If provided, must be the symbol's base currency or a major/minor currency of the base currency (e.g. British pounds vs pence). Pass through tag
18	ExecInst	N			Can contain multiple instructions, space delimited. Required if OrdType = P, and must contain only one of the following M, P or R Pass through tag
21	HandlInst	N			Instructions for firm order handling on Broker trading floor Valid values: 1 = Automated execution order, private, no Broker intervention 2 = Automated execution order, public, Broker intervention OK 3 = Manual order, best execution
22	IDSource	N			Required if SecurityID is present, and must be 1, 2, 4, 5 or A Pass through tag
23	IOIid	N		30	Id of the invited IOI, which must be set for Firm-ups
38	OrderQty	Y			Quantity Range from 1 to 1999999999
40	OrdType	Y			Firm order type. Valid values: 1 = Market 2 = Limit P = Pegged (requires ExecInst)

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Req'd	Default able	Length	Comments
44	Price	N			Price per unit of quantity Required if OrdType = 2 Price range from 0.0001 to 999999.99
47	Rule80A	N	Y		Firm order Capacity Pass through tag Detailed descriptions, please see Section 11.1. BIDS Trading FIX Standard Tag Definitions.
48	SecurityID	N			Must match the alternate security identifier of provided symbol if present Pass through tag
54	Side	Y			Side Only 1= Buy, 2= Sell,3 =Buy Minus 4= Sell Plus 5= Sell Short, 6= Sell Short Exempt are currently supported
55	Symbol	Y		15	Either a listed or OTC instrument
58	Text	N		50	Free format text string
59	TimeInForce	N			Time in force Absence of this field indicates Day order. 0 = Day Order 3 = IOC – Immediate or Cancel 6 = GTD – Good till Date (requires use of ExpireTime (tag 126)) A = EnC – Execute and Cancel

Trade Cancellation	1 = Cancel	Same as OrdStatus	Describes the current state of order

6.4.1.2. Message Template

C in Prov'd means provided under certain circumstances. Tag gets sent out based on certain conditions, which is described in the Comments field.

Tag	Field Name	Prov'd	Comments
	Standard Message Header	Y	MsgType = 8
1	Account	C	Account mnemonic as agreed between buy and sell sides If provided on inbound message or configure to be defaultable
6	AvgPx	Y	Calculated average price of all fills on this firm order. Assigned to 0 when rejected
11	ClOrdID	Y	Unique identifier as assigned
14	CumQty	Y	Total quantity (e.g. number of shares) filled. Assign to 0 when rejected
15	Currency	C	Optional, default to symbol's base currency. If provided, must be the symbol's base currency or a major/minor currency of the base currency (e.g. British pounds vs pence). If provided on inbound message Pass through tag

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Prov'd	Comments
17	ExecID	Y	Unique identifier of each Execution Report message.
18	ExecInst	C	If provided on inbound message Pass through tag
19	ExecRefID	C	Reference identifier used with Cancel transaction types Provided in Trade Cancellation
20	ExecTransType	Y	0 = New 1 = Cancel (when a trade cancellation occurs)
22	IDSource	C	If provided on inbound message Pass through tag
29	LastCapacity	C	Broker capacity in order execution. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2) It is a configurable setting. Valid values: 1 = Agent 3 = Cross as principal (this is a configurable value) 4 = Principal
30	LastMkt	C	If provided on inbound message Pass through tag On Fill/Partially Fill, BIDS Trading will assign it to denote where the execution occurred. If provided, it will be either keyword "BIDS" or route destination (e.g., EBXL)
31	LastPx	Y	Price of this (last) fill. Assign to 0 on New, Cancelled/Pending Cancel, Replace/Pending Replace, Expire
32	LastShares	Y	Quantity of shares bought/sold on this (last) fill. Assign to 0 on New, Cancelled/Pending Cancel, Replace/Pending Replace, Expire
37	OrderID	Y	Includes BIDSOrderId and omsSequenceNo Assign to 'NONE' on order reject
38	OrderQty	Y	Quantity ordered.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Prov'd	Comments
39	OrdStatus	Y	Identifies current status of conditional or firm order. 0 = New 1 = Partially filled 2 = Filled 3 = Done For Day 4 = Cancelled 5 = Replaced 6 = Pending Cancel 8 = Rejected C = Expired E = Pending Replace
40	OrdType	Y	Type. Valid values: 1 = Market 2 = Limit P = Pegged (requires ExecInst)
41	OrigClOrdID	C	ClOrdID of the previous conditional or firm order when canceling or replacing.
44	Price	Y	Price per unit of quantity.
47	Rule80A	Y	Order capacity. Pass through tag
48	SecurityID	C	If provided on inbound message Pass through tag
54	Side	Y	Only 1=Buy, 2=Sell, 3 = Buy Minus 4 = Sell Plus 5=Sell Short, 6= Sell Short Exempt are currently supported
55	Symbol	Y	Either a listed or OTC instrument.
58	Text	C	Free format text string.
59	TimeInForce	Y	Time in force Default to "Day order" if not provided on inbound message. 0 = Day Order 3 = IOC – Immediate or Cancel 6 = GTD – Good til Date (requires use of ExpireTime (tag 126)) A = EnC – Execute and Cancel
60	TransactTime	Y	Time the transaction represented by this ExecutionReport occurred
63	SettlmntTyp	C	If provided on inbound message Pass through tag
65	SymbolSfx	C	If provided on inbound message Depends on gateway configuration, it can with dot or without dot, or not present

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Prov'd	Comments
76	ExecBroker	C	Used if the submitted order is being submitted for another broker Optional for conditional order
103	OrdRejReason	C	Code to identify reason for rejection. Valid values: 0 = Broker / Exchange option 1 = Unknown symbol 2 = Exchange closed 3 = Order exceeds limit 6 = Duplicate ID (e.g. dupe ClOrdID (11))
110	MinQty	Y	Minimum quantity to be executed.
114	LocateReqd	C	If provided on inbound Always set to N if LocateInfo is provided This field should only be populated if required in your jurisdiction.
126	ExpireTime	C	Required if TimeInForce = 6 (GTD) Optional if TimeInForce = A (EnC) Optional if TimeInForce = 3 (IOC) If supplied for 59=3 (IOC) only int value to a maximum of 999 ms will be accepted and interpreted as a delay in milliseconds by which to persist the order for a potential match.
150	ExecType	Y	Describes the type of execution report. 0 = New 1 = Partial fill 2 = Fill 3 = Done For Day 4 = Cancelled 5 = Replace 6 = Pending Cancel 8 = Rejected C = Expired E = Pending Replace
151	LeavesQty	Y	Quantity opens for further execution. LeavesQty = OrderQty (38) – CumQty (14). Assign to 0 on a reject, Cancelled, Expired
168	EffectiveTime	C	Time the details within the message should take effect. Not provided in OrderRejected
207	SecurityExchange	C	MIC of the listing market of the security. Also recognize "US" for any US security. Valid values should follow FIX 4.4 style MIC codes.
211	PegDifference	C	Amount (signed) added to the price of the peg If provided on Pegged Order

7. LEVEL 2 Extended FIX 4.2 PROTOCOL

7.1. Level 2 Inbound Messages

7.1.1. New Order Single

Tag	Field Name	Req'd	Defaultable	Length	Comments
	Standard Message Header	Y			MsgType = D
	Level 1 New Order Single standard tags	Y	Y		Standard tags from New Order Single message in level 1 (see the *BIDS Trading FIX Specification* standard version)
8002	BIDSType	N	Y		Indicates the traders' willingness to commit to a trade. Must match original order. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8003	BIDSInvite	N	Y		Controls whether the presence of a conditional in the system will be advertised to potential counterparties. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8007	BIDSFilterLevel	N	Y		BIDS Filter℠ level See Section 8: BIDS Trading FIX User Defined Tag Definitions
8008	BIDSTradePriority	N	Y		The algorithm to use in determining the best match for the conditional or firm order. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8017	BIDSPriceProtection	N	Y		Indicates the trader's willingness to trade inside NBBO or not See Section 8: BIDS Trading FIX User Defined Tag Definitions
8051	BIDSAutomatchMinVol	N	Y		Minimum Automatch Volume
8053	BIDSRoutePrice	N	Y		The price used to submit the firm-up or firm order to a routing destination
8054	BIDSRouteMinVol	N	Y		The minimum trade volume used to submit the firm-up or firm order to a routing destination

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Req'd	Default able	Length	Comments
8056	BIDSRouteOrdType	N	Y		Type used to submit the firm-up or firm order to a routing destination
8057	BIDSRouteExecInst	N	Y		Instructions used to submit the firm-up or firm order to a routing destination Can contain multiple instructions, space delimited. Required if BIDSRouteOrdType = P, and must contain only one of the following: M, P or R
8058	BIDSRoutePegDifference	N	Y		Amount (signed) added to the price of the peg for a pegged firm-up or firm order. Used to submit to routing destination. Only applicable if 8057 = P or R
8060	BIDSCondOrderVol	N			Quantity ordered from conditional Required if configured to use user-defined tags for conditional volume. OrderQty tag38 is not required and will be ignored
8061	BIDSCondMinVol	N	Y		Minimum quantity of a conditional to be executed. MinQty tag110 will be ignored if configured to use user-defined tags for conditional volumes
8065	BIDSFirmUpMode	N			A qualifier indicating how a conditional will be firmed up. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8066	BIDSAutoFirmUpVol	N			Specify auto firm-up threshold volume
	Standard Trailer	Y			

7.1.2. CancelAndReplace Request (a.k.a Conditional/Firm Order Modification Request)

Tag	Field Name	Req'd	Default able	Length	Comments
	Standard Message Header	Y			MsgType = G
	Level 1 CancelAndReplace Request standard tags	Y	Y		Standard tags from CancelAndReplace Request message in level 1 (see the *BIDS Trading FIX Specification* standard version)

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Req'd	Defaultable	Length	Comments
8002	BIDSType	N	Y		Indicates the traders' willingness to commit to a trade. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8003	BIDSInvite	N	Y		Controls whether the presence of the conditional in the system will be advertised to potential counterparties'. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8007	BIDSFilterLevel	N	Y		BIDS Filter℠ level See Section 8: BIDS Trading FIX User Defined Tag Definitions
8008	BIDSTradePriority	N	Y		The algorithm used to determine the best match for the conditional or firm order. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8017	BIDSPriceProtection	N	Y		Indicates the trader's willingness to trade inside NBBO or not See Section 8: BIDS Trading FIX User Defined Tag Definitions.
8051	BIDSAutomatchMinVol	N	Y		Minimum Automatch Volume
8053	BIDSRoutePrice	N	Y		The price used to submit the firm-up or firm order to a routing destination
8054	BIDSRouteMinVol	N	Y		The minimum trade volume used to submit the firm-up or firm order to routing destination
8056	BIDSRouteOrdType	N	Y		Type used to submit the firm-up or firm order to routing destination
8057	BIDSRouteExecInst	N	Y		Instructions used to submit the conditional or firm order to a routing destination. Can contain multiple instructions, space-delimited. Required if BIDSRouteOrdType = P, and must contain only one of the following: M, P or R
8058	BIDSRoutePegDifference	N	Y		Amount (signed) added to the price of the peg for a pegged conditional or firm order. Used to submit to the routing destination. Only applicable if 8057 = P or R.
8060	BIDSCondOrderVol	N			Quantity ordered from a conditional Required if configured to use user-defined tags for conditional volumes. OrderQty tag38 is not required and will be ignored

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Req'd	Default able	Length	Comments
8061	BIDSCondMinVol	N	Y		Minimum quantity of a conditional to be executed. MinQty tag110 will be ignored if configured to use user-defined tags for conditional volumes
8065	BIDSFirmUpMode	N			A qualifier indicating how a conditional will be firmed up. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8066	BIDSAutoFirmUpVol	N			Specify auto firm-up threshold volume
	Standard Trailer	Y			

7.1.3. Order Cancel Request

Tag	Field Name	Req'd	Length	Comments
	Standard Message Header	Y		MsgType = F
	Level 1 Order Cancel Request standard tags	Y		Standard tags from Order Cancel Request message in level 1 (see the *BIDS Trading FIX Specification* standard version)
8060	BIDSCondOrderVol	N		Quantity ordered from a conditional. Required if configured to use user-defined tags for conditional volumes. OrderQty tag38 is not required and will be ignored
	Standard Trailer	Y		

7.2. Level 2 - Outbound Messages

7.2.1. Execution Report

7.2.1.1. Type of Execution Report

BIDS Trading FIX Message	ExecTransType	ExecType	OrdStatus
NewOrderAccepted	0 = New	0 = New	0 = New
NewOrderRejected	0 = New	8 = Rejected	8 = Rejected
FIXCancelOrderAccepted	0 = New	4 = Cancelled	4 = Cancelled
FIXReplaceOrderAccepted	0 = New	5 = Replace	5 = Replaced
FIXCancelOrderAccepted	0 = New	6 = Pending Cancel	6 = Pending Cancel
FIXReplaceOrderAccepted	0 = New	E = Pending Replace	E = Pending Replace

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

BIDS Trading FIX Message	ExecTransType	ExecType	OrdStatus
OrderGone	0 = New	C = Expired	C = Expired
OrderGone	0 = New	3 = Done For Day	3 = Done For Day
OrderFilled	0 = New	1 = Partially fill	1 = Partially filled
OrderFilled	0 = New	2 = Fill	2 = Filled
OrderUpdated	0 = New	5 = Replace	5 = Replaced
OrderStateUpdated	0 = New	5 = Replace	5 = Replaced
Trade Cancellation	1 = Cancel	Same as OrdStatus	Describes the current state of conditional or firm order
Asymmetric Invitation Issued Notification	3 = Status	5 = Replace	Describes the current state of conditional or firm order

7.2.1.2. Message Template

C in Prov'd means provided under certain circumstances. Tag gets sent out based on certain conditions, which is described in Comments.

Tag	Field Name	Prov'd	Comments
	Standard Message Header	Y	MsgType = 8
	Level 1 Execution Report standard tags	Y	Standard tags from Execution Report message in level 1 (see the *BIDS Trading FIX Specification* standard version)
20	ExecTransType	Y	0 = New 1 = Cancel (when a trade cancellation occurs) 3 = Status (when an asymmetric invitation is issued; level 2 only)
8002	BIDSType	C	Indicates the traders' willingness to commit to a trade. NewOrderRejected: If provided on inbound message. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8003	BIDSInvite	C	Controls whether the presence of the conditional in the system will be advertised to potential counterparties'. NewOrderRejected: If provided on inbound message See Section 8: BIDS Trading FIX User Defined Tag Definitions
8005	BIDSOrderState	Y	Describes the current condition of the conditional or firm order. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8006	BIDSTradeDesk	C	The trade desk of the condtional or firm order owner. NewOrderRejected: If provided on inbound message
8007	BIDSFilterLevel	C	BIDS Filter℠ level. NewOrderRejected: If provided on inbound message. See Section 8: BIDS Trading FIX User Defined Tag Definitions

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Prov'd	Comments
8008	BIDSTradePriority	C	The algorithm to use in determining the best match for the conditional for firm order. NewOrderRejected: If provided on inbound message. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8013	TrdRegPublicationReasons *BIDSCreateDate has been deprecated	C	Trade publication reason Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2). It is a configurable setting. If it appears, it is always set to: 9 = Large in scale
8017	BIDSPriceProtection	C	Indicate the trader's willingness to trade inside NBBO or not. NewOrderRejected: If provided on inbound message. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8019	BIDSNBBPrice	C	Bid Price Not provided in NewOrderRejected
8020	BIDSNBOPrice	C	Ask Price Not provided in NewOrderRejected
8021	BIDSNBBOTimestamp	C	Time of the NBBO Not provided in NewOrderRejected
8023	BIDSLastAction	Y	Describes the reason for the last action affecting the conditional or firm order. 0 = New 1 = Replace 2 = Cancel 3 = Update 4 = Traded 5 = Expire 6 = Cancelled by Firm 8 = Complete 9 = Pending Trade K = External Trade L = Oddlot Cancel M = Pending Trade Lost N = Broker Changed P = Pending Trade Abandoned Q = Cancelled by RTT R = Cancelled after Trade S = Cancelled after Failed Trade
8024	BIDSLastActionTime	C	Timestamp of the last update to the conditional or firm order. NewOrderRejected: If provided on inbound message
8025	BIDSUpdateSeq	C	A counter incremented every time an action is taken on the conditional or firm order. NewOrderRejected: If provided on inbound message

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Prov'd	Comments
8026	BIDSTradeId	C	Uniquely identifies the trade. Provided in OrderFilled
8027	BIDSTradeSource	C	Indicates how the trade originated. Provided in OrderFilled See Section 8: BIDS Trading FIX User Defined Tag Definitions
8051	BIDSAutomatchMinVol	C	Minimum Automatch Volume NewOrderRejected: If provided on inbound message
8053	BIDSRoutePrice	C	The price used to submit the firm-up or firm order to a routing destination
8054	BIDSRouteMinVol	C	The minimum trade volume used to submit the firm up or firm order to a routing destination
8056	BIDSRouteOrdType	C	Type used to submit the firm-up or the firm order to a routing destination
8057	BIDSRouteExecInst	C	Instructions used to submit the firm–up or firm order to the routing destination Can contain multiple instructions, space delimited. Required if BIDSRouteOrdType = P, and must contain only one of the following: M, P or R
8058	BIDSRoutePegDifference	C	Amount (signed) added to the price of the peg for a pegged firm-up or firm order.used to submit to routing destination. Only applicable if 8057 = P or R
8059	BIDSInviteVolume	C	The volume on a conditional invited by a counterparty. Provided only if BIDSOrderState tag8005 = Invited
8060	BIDSCondOrderVol	C	Quantity ordered from conditional. Provided if configured to use user-defined tags for conditional volumes. OrderQty tag38 will not be provided
8061	BIDSCondMinVol	C	Minimum quantity of a conditional to be executed. Provided if configured to use user-defined tags for conditional volumes. MinQty tag110 will not be provided
8062	BIDSInviterType	C	This tag has been deprecated. It will always be populated as 1 (Long Lasting) if BIDS OrderState, tag 8005 = 5 (Invited).
8065	BIDSFirmUpMode	C	A qualifier indicating how a conditional will be firmed up. See Section 8: BIDS Trading FIX User Defined Tag Definitions
8066	BIDSAutoFirmUpVol	C	Specify auto firm-up threshold volume
	Standard Trailer	Y	

7.2.2. Order Cancel Reject – Rejection (FIXCancelOrderRejected & FIXReplaceOrderRejected)

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Prov'd	Comments
	Standard Message Header	Y	MsgType = 9
	Level 1 Order Cancel Reject standard tags	Y	Standard tags from Order Cancel Reject message in level 1 (see the *BIDS Trading FIX Specification* standard version)
	Standard Trailer	Y

8. Actionable IOIs

Note* In Australia, pending further review, Actionable AIOI functionality may not be supported in full from the initial BIDS launch date. Accordingly, the following section is provided for informational purposes only. A BIDS Trading gateway may be designated as allowing Actionable-IOI workflow (AWF) orders only, non-AWF orders only, or both. AWF orders sent to a non-AWF only gateway will be rejected. Likewise, regular non-AWF orders sent to an AWF only gateway will be rejected.

8.1. Inbound Messages

8.1.1. New Order Single

For gateways allowing both AWF and non-AWF orders, when Repeating Group NoRoutingIDs is present, this order is considered as an Actionable IOI.
For gateways allowing AWF orders only, an order without Repeating Group NoRoutingIDs specified is defaulted to an Actionable IOI that routes to all sponsored clients of the broker.
For gateways allowing non-AWF orders only, an order with Repeating Group NoRoutingIDs specified (which is considered to be an Actionable IOI) will be rejected.
For an order identified as an Actionable IOI, either IOINaturalFlag or Repeating Group NoIOIQualifiers must be provided.

Tag	Standard Message Header	Req'd	Defaultable	Length	Comments
	Standard Message Header	Y			MsgType = D
	Level 1 or Level 2 New Order Single tags	Y	Y		Standard and extended tags from New Order Single message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
130	IOINaturalFlag	Y			Required if IOIQualifier is not present. Y = Natural N = Not natural
Repeating Group 199	NoIOIQualifiers	Y			Number of repeating groups of IOIQualifiers. Required if IOIQualifier is present. Required if IOINaturalFlag in not present.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

104	IOIQualifier	Y			Required if NoIOIQualifiers > 0 Required if IOINaturalFlag is not present. If present, must contain exactly one valid qualifier, and any un-recognized qualifier will be dropped. The list of valid qualifiers should be agreed upon during integration process. The following are the predefined qualifiers that are valid for all integrations: N = Client Interest: Block (C:1) H = Client Interest: Working (C:2) U = House Interest: Unwind (H:1) J = House Interest: Position Wanted (H:2) K = House Interest: Market Making (H:3)
End Repeating Group					
Repeating Group 215	NoRoutingIDs	Y			Number of repeating groups of RoutingID and RoutingType values. Required if any RoutingType and RoutingIDs are specified. Required for Actionable IOI.
216	RoutingType	Y			Indicates the type of RoutingID specified. Valid Values: 1 = TargetFirm 2 =Target List
217	RoutingID	Y			Name of the firm for the recipient.
End Repeating Group					
8073	BIDSOriginatingBroker	N	Y		Used if the submitted AIOI is being submitted for another broker
Repeating Group 8077	NoBIDSTargetBrokers	N			Number of repeating groups of BIDSTargetBroker. Required if any BIDSTargetBroker is specified.
8078	BIDSTargetBroker	N			Name of the target broker.
End Repeating Group					
	Standard Trailer	Y			

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

8.1.2. CancelAndReplace Request (a.k.a Conditional/Firm Order Modification Request)

8.1.2.1. Actionable IOI attributes tags are ignored if provided in CancelAndReplace Request, includes IOINaturalFlag (130), NoIOIQualifiers (199,104), NoRoutingIDs (215,216,217) and NoBIDSTargetBrokers (8077,8078).

Tag	Field Name	Req'd	Defaultable	Length	Comments
	Standard Message Header	Y			MsgType = G
	Level 1 or Level 2 CancelAndReplace Request tags	Y	Y		Standard and extended tags from CancelAndReplace Request message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
130	IOINaturalFlag	N			Y = Natural N = Not natural
Repeating Group 199	NoIOIQualifiers	N			Number of repeating groups of IOIQualifiers. Required if IOIQualifier is present.
104	IOIQualifier	N			Required if NoIOIQualifiers > 0 If present, must contain exactly one valid qualifier, and any un-recognized qualifier will be dropped. The list of valid qualifiers should be agreed upon during integration process. The following are the predefined qualifiers that are valid for all integrations: N = Client Interest: Block (C:1) H = Client Interest: Working (C:2) U = House Interest: Unwind (H:1) J = House Interest: Position Wanted (H:2) K = House Interest: Market Making (H:3)
End Repeating Group					
Repeating Group 215	NoRoutingIDs	N			Number of repeating groups of RoutingID and RoutingType values. Required if any RoutingType and RoutingIDs are specified.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Req'd	Default able	Length	Comments
216	RoutingType	N			Indicates the type of RoutingID specified. Valid Values: 1 = TargetFirm 2 =TargetList
217	RoutingID	N			Name of the firm for the recipient.
End Repeating Group					
	Standard Trailer	Y			

8.2. Outbound Messages

8.2.1. Execution Report

C in Prov'd means provided under certain circumstances. Tag gets sent out based on certain conditions, which is described in Comments.

Tag	Field Name	Prov'd	Comments
	Standard Message Header	Y	MsgType = 8
	Level 1 or Level 2 Execution Report standard tags	Y	Standard and extended tags from Execution Report message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
375	ContraBroker	C	Depends on gateway setting, contra firm (the firm on the other side of the trade) is reported in either tag375 or tag8070. Applies to AIOI Workflow (AWF) trades only. Provided in OrderFilled(tag150=1/2) only.
8069	BIDSCentralCounterparty	C	The CCP handling the trade. Provided in Fill/Partial Fill (OrdStatus tag 39 = 1 /2) only. It is a configurable setting.
8070	TargetContraFirm	C	Depends on gateway setting, contra firm (the firm on the other side of the trade) is reported in either tag375 or tag8070. Applies to AIOI Workflow (AWF) trades only. Provided in OrderFilled(tag150=1/2) only.

9. Canada

This Chapter is intended to capture FIX requirements as pertaining to the Canadian market. Where inconsistencies exist between tags listed below and chapters 6 and 7 specifications, the tags in this section take precedence.

9.1. Symbology

BIDS Trading for Canada use tag55 only for symbol.

9.2. Capacity

BIDS Trading for Canada only uses tag47 for order's capacity, not tag528.
Supported values in tag47 listed as below:

- IN = Inventory
- NC = Non-Client
- CL = Client
- MC = Multi Client
- ST = Specialist
- MP = ME Pro Order
- OF = Options Firm Account
- OT = Options Market Maker
- BU = Bundled

9.3. Inbound Messages

9.3.1. New Order Single

Tag	Standard Message Header	Req'd	Default able	Length	Comments
	Standard Message Header	Y			MsgType = D
	Level 2 New Order Single tags	Y	Y		Standard and extended tags from New Order Single message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

47	Rule80A	N	Y		Order Capacity Valid values: • IN = Inventory • NC = Non-Client • CL = Client • MC = Multi Client • ST = Specialist • MP = ME Pro Order • OF = Options Firm Account • OT = Options Market Maker • BU = Bundled
1724	LEI_OrderOrigination	N			Identify the type of customer sending the order. Pass-thru tag.
2883	LEI_RoutingArrangementIndicator	N			Routing arrangement is in place (1 or 0, meaning yes or no, respectively). Pass-thru tag.
6763	UMIRRegulationID	N			SS = Significant Shareholder IA = Insider
7003	ProgramTrade	N			Identify this order as part of a program trade (Y or N). Pass-thru tag.
7012	Anonymous	N			Anonymize this order when trade reporting (Y or N).
7013	RegulationID	N			Does not affect order handling but is reported to feeds. Pass-thru tag.
7713	NoTradeFeat	N			Defines how to prevent a self-trade.
7714	NoTradeKey	N			Identifier for self-trade prevention.
7729	ShortMarkingExempt	N			Used by regulators to identify directional neutral accounts. Pass-thru tag.
8073	BIDSOriginatingBroker (aka Jitney)	N			Broker on whose behalf this order is being submitted if different than the executing broker.
8074	SourceClOrdID	N			Source's ClOrdID. Pass-thru tag.
18025	LEI_CustomerAccount	N			Account number for clients not eligible to obtain an LEI. Pass-thru tag.
18026	LEI_AlgorithmID	N			Unique identifier for the end-client orders automatically generated on a predetermined basis. Pass-thru tag.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

18027	CustomerLEI	N			LEI for clients eligible to obtain an LEI including LEI of the foreign dealer equivalent (Encryption Required). Pass-thru tag.
18028	BrokerLEI	N			Non-PO IIROC Dealer Member (Correspondent Broker). Pass-thru tag.
22010	TraderID	Y			Identifies the broker trader responsible for the order.
	Standard Trailer	Y			

9.3.2. CancelAndReplace Request (a.k.a Conditional/Firm Order Modification Request)

Tag	Standard Message Header	Req'd	Default able	Length	Comments
	Standard Message Header	Y			MsgType = G
	Level 2 CancelAndReplace Request tags	Y	Y		Standard and extended tags from CancelAndReplace Request message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)

9.4. Outbound Messages

9.4.1. Execution Report

9.4.1.1. Type of Execution Report

Please refer to Level 2 Types of Execution Report except Asymmetric Invitation Issued Notification, plus the following.

BIDS Trading FIX Message	ExecTransType	ExecType	OrdStatus
Trade Correction	2 = Correct	Same as OrdStatus	Describes the current state of conditional or firm order

9.4.1.2. Message Template

Tag	Field Name	Prov'd	Comments
	Standard Message Header	Y	MsgType = 8
	Level 2 Execution Report standard tags	Y	Standard and extended tags from Execution Report message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
20	ExecTransType	Y	0 = New 1 = Cancel (when a trade cancellation occurs) 2 = Correct (when a trade correction occurs)
375	ContraBroker	N	Contra firm (the firm on the other side of the trade) is reported in tag375. Provided in OrderFilled(tag150=1/2) only.
851	LastLiquidityInd	N	Indicator to identify whether fill was result of a liquidity provider providing or liquidity taker taking liquidity. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2). 1 =Added Liquidity 2 = Removed Liquidity 8 = As a result of conditional order execution

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Prov'd	Comments
1724	LEI_OrderOrigination	N	Identify the type of customer sending the order. Pass-thru tag.
2883	LEI_RoutingArrangementIndicator	N	Routing arrangement is in place (1 or 0, meaning yes or no, respectively). Pass-thru tag.
6763	UMIRRegulationID	N	SS = Significant Shareholder IA = Insider
6776	PrincipalTrade	N	Present on executions where Broker executed a Principal trade. If present, value is Y. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2)
6777	WashTradeIndicator	N	Indicates a wash trade. Y = wash trade Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2)
7003	ProgramTrade	N	Identify this order as part of a program trade (Y or N). Pass-thru tag.
7012	Anonymous	N	Anonymize this order when trade reporting (Y or N).
7013	RegulationID	N	Does not affect order handling but is reported to feeds. Pass-thru tag.
7713	NoTradeFeat	N	Defines how to prevent a self-trade.
7714	NoTradeKey	N	Identifier for self-trade prevention.
7729	ShortMarkingExempt	N	Used by regulators to identify directional neutral accounts. Pass-thru tag.
8073	BIDSOriginatingBroker (aka Jitney)	N	Broker on whose behalf this order is being submitted if different than the executing broker.
8074	SourceClOrdID	N	Source's ClOrdID. Pass-thru tag.
8090	BIDSExecBroker	N	Executing broker.
8091	BIDSContraExecBroker	N	Contra executing broker (the broker on the other side of the trade). Provided in OrderFilled(tag150=1/2) only.
9882	FeeCode	N	Fee code associated with an execution. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2)
9883	PrintFeeCode	N	Fee code associated with an execution that is printed back to the customer. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2)
18025	LEI_CustomerAccount	N	Account number for clients not eligible to obtain an LEI. Pass-thru tag.
18026	LEI_AlgorithmID	N	Unique identifier for the end-client orders automatically generated on a predetermined basis. Pass-thru tag.
18027	CustomerLEI	N	LEI for clients eligible to obtain an LEI including LEI of

10. Australia

This Chapter is intended to capture FIX requirements as pertaining to the Australian market. Where inconsistencies exist between tags listed below and chapters 6 and 7 specifications, the tags in this section take precedence.

10.1. Symbology

BIDS Trading for Australia supports two different types of symbology:

- Symbol Tag(55) only
- ISIN: IDSource(22)=4 with ISIN value in SecurityID(48).

10.2. Capacity

BIDS Trading for Australia only uses tag47 for order's capacity, not tag528.
Supported values in tag47 listed as below:

- A = Agency single order
- P = Principal
- X = Mixed

10.3. Inbound Messages

10.3.1. New Order Single

Tag	Standard Message Header	Req'd	Default able	Length	Comments
	Standard Message Header	Y			MsgType = D
	Level 2 New Order Single tags	Y	Y		Standard and extended tags from New Order Single message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
22	IDSource	N			Valid values: 4 = ISIN Number
47	OrderCapacity	N	Y		Order Capacity Valid values: • A = Agency single order • P = Principal • X = Mixed
48	SecurityID	N			ISIN when IDSource (22) = 4 is specified.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

6802	ClientCrossRef	N			Can be used to provide additional client side cross reference information. Max length is 15 characters. Pass-thru tag.
6803	ShortSellNakedQty	N			For a short sell order, this field defines the portion of order quantity that is naked. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored.
6804	ShortSellCoveredQty	N			For a short sell order, this field defines the portion of order quantity that is covered. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored.
6805	ShortSellLongQty	N			For a short sell order, this field defines the portion of order quantity that is owned by the participant that placed the order. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored. The sum of ShortSellNakedQty, ShortSellCoveredQty and ShortSellLongQty should equal to the OrderQty for a short sell order. The ShortSellLongQty itself should not be equal to the OrderQty.
8138	OriginOfTrans				Market Integrity Rule defined field for Origin of Order e.g., ACN, ABN, CHESS HIN, or other internal client identifier. Max 20 characters. Pass-thru tag.
8139	IntermediaryID				Market Integrity Rule defined field for Intermediary Identifier – may be populated with AFS license number. Max 10 characters. Pass-thru tag.
8140	DirectedWholesaleIndic				Market Integrity Rule defined field to identify wholesale client Y/N value. Default = N Pass-thru tag.
8177	RemoveCrossingFromClearing	N			Boolean field that instructs BIDS not to send a crossing to the clearing house.
8182	OrderRestrictions	N			Broker Preferencing logic can ONLY be enabled/disabled by contacting Market Operations to request that it be configured as a default setting on a per FIX Gateway basis. If a participant elects to have broker preferencing enabled, this tag <8182> permits the default setting to be overridden. I = Override broker preference default setting
	Standard Trailer	Y

10.3.2. CancelAndReplace Request (a.k.a Conditional/Firm Order Modification Request)

Tag	Standard Message Header	Req'd	Defaultable	Length	Comments
	Standard Message Header	Y			MsgType = G
	Level 2 CancelAndReplace Request tags	Y	Y		Standard and extended tags from CancelAndReplace Request message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
6802	ClientCrossRef	N			Can be used to provide additional client side cross reference information. Max length is 15 characters. Pass-thru tag.
6803	ShortSellNakedQty	N			For a short sell order, this field defines the portion of order quantity that is naked. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored.
6804	ShortSellCoveredQty	N			For a short sell order, this field defines the portion of order quantity that is covered. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored.
6805	ShortSellLongQty	N			For a short sell order, this field defines the portion of order quantity that is owned by the participant that placed the order. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored. The sum of ShortSellNakedQty, ShortSellCoveredQty and ShortSellLongQty should equal to the OrderQty for a short sell order. The ShortSellLongQty itself should not be equal to the OrderQty.
8138	OriginOfTrans	N			Market Integrity Rule defined field for Origin of Order e.g. ACN, ABN, CHESS HIN, or other internal client identifier. Max 20 characters. Pass-thru tag.
8139	IntermediaryID	N			Market Integrity Rule defined field for Intermediary Identifier – may be populated with AFS license number. Max 10 characters. Pass-thru tag.
8140	DirectedWholesaleIndic	N			Market Integrity Rule defined field to identify wholesale client Y/N value. Default = N Pass-thru tag.
8177	RemoveCrossingFromClearing	N			Boolean field that instructs BIDS not to send a crossing to the clearing house.

10.3.2.1.

10.3.3. Order Cancel Request

Tag	Field Name	Req'd	Length	Comments
	Standard Message Header	Y		MsgType = F
	Level 2 Order Cancel Request tags	Y		Standard and extended tags from Order Cancel Request message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
	Standard Trailer	Y		

10.3.3.1.

10.4. Outbound Messages

10.4.1. Execution Report

10.4.1.1. Type of Execution Report

Please refer to Level 2 Types of Execution Report except Asymmetric Invitation Issued Notification.

10.4.1.2. Message Template

Tag	Field Name	Prov'd	Comments
	Standard Message Header	Y	MsgType = 8
	Level 2 Execution Report standard tags	Y	Standard and extended tags from Execution Report message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
29	LastCapacity	C	Broker capacity in order execution. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2). Valid values: 1 = Agent 2 = Cross as agent 3 = Cross as principal 4 = Principal 5 = Mixed 6 = Cross as Mixed

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Prov'd	Comments
851	LastLiquidityInd	C	Indicator to identify whether fill was result of a liquidity provider providing or liquidity taker taking liquidity. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2) It is a configurable setting. 1 =Added Liquidity 2 = Removed Liquidity C = As a result of conditional order execution 8 = As a result of conditional order execution
6802	ClientCrossRef	N	Always populates this field with the original value, if any, assigned by client.
6803	ShortSellNakedQty	N	For a short sell order, this field defines the portion of order quantity that is naked. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is not included.
6804	ShortSellCoveredQty	N	For a short sell order, this field defines the portion of order quantity that is covered. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is not included.
6805	ShortSellLongQty	N	For a short sell order, this field defines the portion of order quantity that is owned by the participant that placed the order. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is not included. The sum of ShortSellNakedQty, ShortSellCoveredQty and ShortSellLongQty should equal to the OrderQty for a short sell order. The ShortSellLongQty itself should not be equal to the OrderQty.
6807	TransactID	N	A unique identifier assigned by CBOE Australia for each trade that can be cross referenced against CHESS messaging for post trade processing. It contains 10 characters in the format XXXXYYYYYY where X = the Serial Trade Qualifier and Y = the Trade Serial Number. The first character of the Serial Trade Qualifier identifies the trading venue. CHESS has allocated "C" to identify CBOE Australia trades. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2).
8138	OriginOfTrans	N	Will be returned if provided on inbound message.
8139	IntermediaryID	N	Will be returned if provided on inbound message.
8140	DirectedWholesaleIndic	N	Will be returned if provided on inbound message.
8177	RemoveCrossingFromClearing	N	Will be returned if provided on inbound message.
8182	OrderRestrictions	N	Will be returned if provided on inbound message.
8183	CrossType	N	Defines the matching logic applied for this trade if it was an on-market crossing. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2). Valid values are: 101 = trade was the result of a broker preferenced crossing 102 = other

11. Japan

This Chapter is intended to capture FIX requirements as pertaining to the Japan market. Where inconsistencies exist between tags listed below and chapters 6 and 7 specifications, the tags in this section take precedence.

11.1. Symbology

BIDS Trading for Japan supports two different types of symbology:

- Symbol Tag(55) only
- ISIN: IDSource(22)=4 with ISIN value in SecurityID(48) and SecurityExchange(207) to identify market
- RIC: IDSource(22)=5 with RIC code in SecurityID(48)

11.2. Capacity

BIDS Trading for Japan only uses tag47 for order's capacity, not tag528.
Supported values in tag47 listed as below:

- A = Agency single order
- P = Principal

11.3. Inbound Messages

11.3.1. New Order Single

Tag	Standard Message Header	Req'd	Default able	Length	Comments
	Standard Message Header	Y			MsgType = D
	Level 2 New Order Single tags	Y	Y		Standard and extended tags from New Order Single message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
22	IDSource	N			Valid values: 4 = ISIN Number 5 = RIC

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

47	OrderCapacity	N	Y		Order Capacity Valid values: • A = Agency single order • P = Principal
48	SecurityID	N			ISIN when IDSource (22) = 4 is specified.
207	SecurityExchange	N			Required when the IDSource (Field ID 22) equals ISIN (4), uses to specify the Market for the ISIN number. "T" = Tokyo Stock Exchange
544	CashMargin	N			"1" = Cash Absence of this field indicates Cash order. Any other value supplied by the client will cause the order to be rejected.
7714	NoTradeKey	N			Orders with the same value in NoTradeKey will not be matched against each other, regardless of participant. If the order is not fully-filled, the order will rest on the book.
8093	OrderClassification	N			Specify the Order Classification. Supported values: 1 = Non Low Latency Trading (Auto) 2 = Non Low Latency Trading (Manual) 3 = Market Making Strategy 4 = Arbitrage Strategy 5 = Directional Strategy 6 = Other Strategy
8174	NoSelfTrade	N			Identified as Self-Trade Prevention (STP) order. Orders from the same participant with the same NoSelfTrade key will not be allowed to match with each other. If the order is not fullyfilled, the order will rest on the book.
8182	OrderRestrictions	N			Broker Preferencing logic can ONLY be enabled/disabled by contacting Market Operations to request that it be configured as a default setting on a per FIX Gateway basis. If a participant elects to have broker preferencing enabled, this tag <8182> permits the default setting to be overridden. I = Override broker preference default setting
	Standard Trailer	Y			

11.3.1.1.

11.3.2. CancelAndReplace Request (a.k.a Firm Order Modification Request)

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Standard Message Header	Req'd	Defaultable	Length	Comments
	Standard Message Header	Y			MsgType = G
	Level 2 CancelAndReplace Request tags	Y	Y		Standard and extended tags from CancelAndReplace Request message in level 2 (see the *BIDS Trading FIX Specification* level 2 version)
7714	NoTradeKey	N			Refer to New Order Single message for description. If this tag is omitted, the value of NoTradeKey of the order will be cleared, i.e. reset to normal order without self-trade prevention.
8174	NoSelfTrade	N			Refer to New Order Single message for description. If this tag is omitted, the value of NoSelfTrade of the order will be cleared, i.e. reset to normal order without self-trade prevention.
	Standard Trailer	Y			

11.3.3. Order Cancel Request

2668	NoTrdRegPublications	NumInGroup		Number of regulatory publication rules in repeating group. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2). It is a configurable setting. If appears, it is always set to 1.	Execution Report
2669	TrdRegPublicationType	int		Specifies the type of regulatory trade publication. Additional reasons for the publication type may be specified in TrdRegPublicationReason(2670). Required if NoTrdRegPublications(2668) > 0. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2). It is a configurable setting. If appears, it is always set to: 0 = Pre-trade transparency waiver	Execution Report
2670	TrdRegPublicationReason	int		Additional reason for trade publication type specified in TrdRegPublicationType(2669). Reasons may be specific to regulatory trade publication rules. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2). It is a configurable setting. If appears, it is always set to: 9 = Large in scale	Execution Report
2883	LEI_RoutingArrangementIndicator	int		Routing arrangement is in place (1 or 0, meaning yes or no, respectively). Pass-thru tag. Canada only.	New Order Single Order Cancel Replace Request Order Cancel Request Execution Report

12.2. BIDS Trading FIX User Defined Tag Definitions

Tag	Field Name	Format	Length	Description	Found in msgs

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Format	Length	Description	Found in msgs
5700	LocateBroker	String		FINRA Rule 3370 (Short Sell Rule) requires that every short sell specify a Locate (Tag 114=Y), identifying which broker has loaned the stock to settle the short sale. This field should only be present if required in your jurisdiction.	New Order Single CancelAndReplaceRequest Execution Report
5701	LocateIndicator	String		The actual locate identifier/reference provided by the LocateBroker (5700). This field should only be present if required in your jurisdiction.	New Order Single CancelAndReplaceRequest Execution Report
6763	UMIRRegulationID	String		Does not affect order handling but is reported to feeds. SS = Significant Shareholder IA = Insider Canada only.	New Order Single CancelAndReplaceRequest Execution Report
6776	PrincipalTrade	Boolean		Present on executions where Broker executed a Principal trade. If present, value is Y. Canada only.	Execution Report
6777	WashTradeIndicator	Boolean		Indicates a wash trade. Canada only.	Execution Report
6802	ClientCrossRef	String		Can be used to provide additional client-side cross reference information. Max length is 15 characters. Australia only.	New Order Single Order Cancel Replace Request Execution Report
6803	ShortSellNakedQty	Qty		For a short sell order, this field defines the portion of order quantity that is naked. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored. Australia only.	New Order Single Order Cancel Replace Request Execution Report
6804	ShortSellCoveredQty	Qty		For a short sell order, this field defines the portion of order quantity that is covered. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored. Australia only.	New Order Single Order Cancel Replace Request Execution Report

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

Tag	Field Name	Format	Length	Description	Found in msgs
6805	ShortSellLongQty	Qty		For a short sell order, this field defines the portion of order quantity that is owned by the participant that placed the order. It is assumed 0 if it is not specified with a short sell order. For non-short sell order, this field is ignored. The sum of ShortSellNakedQty, ShortSellCoveredQty and ShortSellLongQty should equal to the OrderQty for a short sell order. The ShortSellLongQty itself should not be equal to the OrderQty. Australia only.	New Order Single Order Cancel Replace Request Execution Report
6807	TransactID	String		A unique identifier assigned by CBOE Australia for each trade that can be cross referenced against CHESS messaging for post trade processing. It contains 10 characters in the format XXXXYYYYYY where X = the Serial Trade Qualifier and Y = the Trade Serial Number. The first character of the Serial Trade Qualifier identifies the trading venue. CHESS has allocated "C" to identify CBOE Australia trades. Provided on Fill/Partial Fill (OrdStatus tag 39 = 1 /2). Australia only.	Execution Report
7003	ProgramTrade	Boolean		Identify this order as part of a program trade (Y or N). Pass-thru tag. Canada only.	New Order Single Order Cancel Replace Request Execution Report
7012	Anonymous	Boolean		Anonymize this order when trade reporting (Y or N). Canada only.	New Order Single Order Cancel Replace Request Execution Report
7013	RegulationID	String		Does not affect order handling but is reported to feeds. SS = Significant Shareholder IA = Insider Pass-thru tag. Canada only.	New Order Single Order Cancel Replace Request Execution Report
7713	NoTradeFeat	String		Defines how to prevent a self-trade. IB = Ignore match (do not trade) EB = Suppress from Tape Canada only.	New Order Single Order Cancel Replace Request Execution Report
7714	NoTradeKey	String		Identifier for self-trade prevention. Canada and Japan only.	New Order Single Order Cancel Replace Request Execution Report

13. Additional Settings and Parameters

There are multiple settings that the BIDS makes available to users. Your BIDS Operations Representative can discuss these settings prior to enabling this activity in BIDS and at any time thereafter if help is requested or required. The following settings and parameters are server-side settings and must be set/changed by BIDS personnel on the user's behalf. Please consult with your BIDS Operations Representative for assistance.

13.1. Applies to both Level 1 and 2 gateways

1. Include these special handling codes in OATS reports generated on behalf of this Introducing broker regarding their sponsored flow in BIDS. – Applies in US only
2. Mnemonic of the Introducing Broker known to the sponsored firm's FIX gateway.
3. Mnemonic of the sponsored firm known to the Introducing Broker 's FIX gateway.
4. Maximum number of locates allowed in a conditional or firm order.
5. Specify heartbeat interval for this gateway.
6. Symbology used by this gateway.
7. Should this gateway initiate or wait for connection?
8. Default trader to use if not explicitly specified in incoming FIX message.
9. Are client ids from this source unique by trader and/or gateway?
10. Populate tag 5700 and 5701 in outbound ERs?
11. What status to use in ERs for a conditional or firm order that expiries at Close.
12. Issue a cancel-all when this gateway disconnects?
13. Which tag incoming FIX messages use for specifying route destination.
14. Do not echoing incoming sendSubId (tag 50) in outbound ERs (tag 57)
15. Whether to set the status (39) to 5 (Replace) or the highest status in ERs for CNR acks and unsolicited updates.
16. If enabled, untraded IOCs will be rejected instead of accepted.
17. IOCs will be kept on book for this duration before cancelled.
18. Incoming FIX message uses Alt IDs like CUSIP and SEDOL to specify the symbol.

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

19. If enabled, will include Last Capacity tag (29) in ER
20. TBR drops for firm orders through this gateway are to be diverted to the designated TBRGW.
21. Firm orders tagged with a pool ID will interact with the same pool before others, given price rankings are equal (and dynamic score rankings are equal for invitation), even when others have larger volume.
22. Use this separator to delimit locate IDs/brokers in tag 5700 and 5701.
23. Extraneous text in symbol field of incoming FIX messages that is to be stripped before processing.
24. Text to be appended to outbound symbol fields.
25. Whether or not to send an ER responding to the Placement ack (NOS) received.
26. Tag/value pairs in an incoming FIX message found in this list will be dropped before the message is processed.
27. Whether to report CCP tag (8069) in fill ER drops by OMS and TBR.
28. Precision used for outbound timestamps i.e.) milliseconds, microseconds and nanoseconds or legacy
29. Whether to include Trade Reporting Indicator(tag2524) when sending fill ERs
30. Whether to include LIS Waiver (tag2668, tag2669 and tag2670) when sending fill ERs.
31. Whether and How to include Broker LEI when sending fill ERs.
32. Whether and how to report LIS waiver
33. Whether to include BIDSTradeId tag 8026 in fills and TBR drops.
34. Whether to include Trading Venue Txn Identification Code (tag 8016 or tradeId group) in fills ERs .
35. Whether to disable currency conversion e.g. converting between British pounds and pence.
36. Whether to include TrdRegTimestamp (tag 769) in fills and TBR drops
37. Whether to disable currency conversion e.g. converting between British pounds and pence
38. Use this to specify workflow type for the gateway. A gateway may be set to accept AWF orders only, accept non-AWF orders only, or accept both types.
39. Use this to specify the list of FIX custom tags that should be echo'ed back in (non-reject) outbound FIX messages
40. Whether and How to report Target Contra Firm when sending fill ERs.
41. Whether to echo AIOI qualifier and IOINaturalFlag tags in ERs

13.2. Only Applies to Level 2 Gateways

1. Use standard FIX or allow extended tags for conditionals/invitation?

Copyright © 2009-2023 BIDS Holdings L.P. All Rights Reserved.

2. If enabled, will include Last Mkt tag (30) in ER for fill.

3. IOCs as firm-ups will be kept on book for this duration before cancelled.

4. Do not include tag 41 in ER for conditionals cancelled due to firm-up.

5. If another trader has a BE with the same ID as the incoming one, should that BE be cancelled?

6. Is the source system acting as a hub and are conditionals and firm orders from multiple firms coming through it?

7. Treat incoming IOCs as (uncommitted) blotter entries?

8. If IOCs are used as BEs, will compose the unique BE ID using the value in this tag.

9. Always set incoming conditionals as auto-firm-up?

10. Notify via Level 2 OMS Gateway if a conditional or firm order sends an invitation without itself receiving one (e.g. the order is a firm order).

11. If enabled to send tag 8013 to mean TradePublicationReasons then must skip sending BIDSCreateDate in tag 8013

12. If specified, all AIOI fill ERs will contain tag 8072 set to this value, both back to the OMSGW and via TBR drop of the broker's own flow.

13. If provided, originatingBroker is defaulted to this value if tag 8073 is not explicitly set in a new AIOI.
