NASDAQ NOIView
Version 2.1

1. Overview

NASDAQ NOIView – Version 2.1 is being released in association of the equity symbology initiative and will support issue symbols up to 8 characters in total length.

NASDAQ NOIView 2.1 is a direct data feed product offered by The NASDAQ Stock Market®, which features the following data elements:

- Net Order Imbalance Data: In the minutes leading up to the NASDAQ Opening and Closing Crosses as well as IPO/Halt/Imbalance Cross, NASDAQ disseminates the indicative clearing price and net order imbalance in the NASDAQ execution system. Because the calculation includes non-displayable as well as displayable order types, the net order imbalance indicator (NOII) is the best predictor of the NASDAQ opening and closing prices available to the public.

- Administrative messages, such trading actions and symbol directory for NASDAQ-listed issues:

    - Stock trading action messages are used to inform market participants when a security is halted / paused, released for quotation and released for trading.

    - Stock symbol Directory messages provide basic security data such as the market tier and Financial Status Indicator.

Please note that NOIView is a filtered NASDAQ data feed product. The NOII and administrative messages are also supported on the NASDAQ TotalView-ITCH and TotalView-Aggregated data feed options.

2. Architecture

The NOIView 2.1 feed is made up of a series of sequenced messages. Each message is variable in length based on the message type and is composed of non-control ASCII bytes. The messages that make up the NOIView 2.1 protocol are typically delivered using a higher level protocol that takes care of sequencing and delivery guarantees.

NASDAQ offers the NOIView 2.1 data feed in three protocol options:

- SoupTCP

- Compressed via SoupTCP

- MoldUDP

Please note that, for each data center connection, NOIView 2.1 messages will be disseminated via a single outbound data channel.

3. Data Types

All numeric fields are represented in ASCII digits and are right-justified. Padding spaces appear on the left as necessary.

Prices are given in decimal format with 6 whole number places followed by 4 decimal digits. The whole number portion is padded on the left with spaces; the decimal portion is padded on the right with zeros. The decimal point is implied by position; it does not appear inside the price field.

Timestamp reflects the NASDAQ system time at which the outbound message was generated. NASDAQ states time as the number of milliseconds past midnight. The time zone is U.S. Eastern Time.

All alpha fields are left-justified. Padding spaces appear on the right as necessary.

4. Message Formats

NASDAQ NOIView 2.1 supports three basic types of messages:

- System Events
- NASDAQ Net Order Imbalance Indicators
- Administrative Data

Within the system event and administrative types, NASDAQ may support multiple message formats as outlined below.

4.1 System Event Message

4.2 Administrative Messages

4.2.1 Stock Directory

At the start of each trading day, NASDAQ disseminates stock directory messages for all active symbols in the NASDAQ execution system.

Prior to the start of system hours, NASDAQ will send out a Trading Action spin. In the spin, NASDAQ will send out a Stock Trading Action message with the "T" (Trading Resumption) for all NASDAQ- and other exchange-listed securities that are eligible for trading at the start of the system hours. If a security is absent from the pre-opening Trading Action spin, firms should assume that the security is being treated as halted in the NASDAQ platform at the start of the system hours. Please note that securities may be halted in the NASDAQ system for regulatory or operational reasons.

After the start of system hours, NASDAQ will use the Trading Action message to relay changes in trading status for an individual security. Messages will be sent when a stock is:

- Halted / paused
- Released for quotation
- Released for trading.

Trading Action – Reason Codes

For NASDAQ-listed issues, NASDAQ acts as the primary market and has the authority to institute a trading halt or trading pause in an issue due to news dissemination or regulatory reasons.

For CQS issues, NASDAQ abides by any regulatory trading halts and trading pauses instituted by the primary or listing market as appropriate.

For both issue types, NASDAQ may also halt trading for operational reasons.

NASDAQ will send out a trading action message to inform its market participants when the trading status of an issue changes. For informational purposes, NASDAQ also attempts to provide the reason for each trading action update. For bandwidth efficiency reasons, NASDAQ uses a 4-byte code for the reason on its outbound data feeds.
